

EARN CASH INCENTIVES

Government buildings can take advantage of Delmarva Power's standard incentives for installing new, energy-efficient equipment. Cash incentives are also available to customers planning unique equipment and system upgrades and industrial process improvements. If you are planning energy-saving improvements that are not eligible for standard incentives, you may be eligible for custom incentives.

Delmarva Power pays cash incentives for qualified energy-efficient improvements, such as:

- Lighting Fixtures & Controls
- Variable Frequency Drives for Motors
- Packaged HVAC Units
- Chillers
- Commercial Refrigeration
- Commercial Water Heating
- Commercial Equipment
- Specialized Controls
- Appliances & Equipment

ADDITIONAL INCENTIVE OPPORTUNITIES

- Operations & Maintenance Training Incentive
- Technical support and cash incentives are offered to owners and design teams for new construction, major renovation, and building addition projects.

Government agencies spend more than \$10 billion a year on energy to provide public services and meet constituent needs—while grappling with tightening budgets. Yet nearly one-third of the energy used to run typical government buildings goes to waste.

Energy-efficiency improvements are right in line with the purpose of public organizations—to serve others. Reducing energy costs frees funds for important projects, and demonstrates your good stewardship of taxpayer and contributor dollars.¹

THE BENEFITS ARE NUMEROUS

With efficiency improvements your agency can:

- Reduce energy and water costs
- Increase employee comfort
- Enhance light and air quality
- Reduce maintenance and extend equipment life
- Contribute to a more sustainable future

ADDITIONAL SAVINGS

Earn a 10 percent bonus incentive by installing multiple measure-types in the same facility when two or more different measure-types are completed. The bonus incentive is applied to qualified prescriptive measures. If you are interested in learning more about the Multiple Measure-Type Bonus Incentive, please contact us.

GET STARTED TODAY!

Identify energy-efficiency opportunities in your facility and analyze their energy impact and cost-effectiveness. Incentives are also available to assist with Energy Savings Studies.

If you need technical assistance in completing an energy-efficiency project, qualified contractors from our Trade Ally Network are available to assist you. To find a trade ally in your area please visit <https://cienergyefficiency.DelmarvaPower.com/Findally.aspx>.

PROJECT SNAPSHOT

Government facilities have access to technical and financial resources to improve lighting, upgrade heating, ventilation and control systems and build high-performance buildings. Below is an example of a recently completed project at a local government facility. Delmarva Power supported the project with advice early in the process and cash incentives after the system was installed—helping the customer save money, improve comfort and boost productivity.

	Lighting / Sensors	VFD	HVAC	Energy Study
Project Cost	\$12,824	\$256,000	\$130,400	\$21,126
Annual Energy Savings (kWh)	18,915	468,300	71,454	-
Annual Energy Cost Savings ²	\$2,837	\$70,245	\$10,718	-
Incentive	\$5,185	\$37,464	\$21,985	\$5,282
Payback	2.7	3.1	10.1	-

²Average price of electricity = \$0.15/kWh

This customer took advantage of the multiple-measure bonus incentive installing lighting, VFDs and HVAC measures. This multiple-measure project will provide an additional incentive of \$6,464 with a payback of 3.9 years. Individual projects provide savings as well—this customer will save up to \$2,837 in estimated annual energy costs from lighting alone.
